

Passive or active storage

passive

Select the right safety cabinet before preparing your risk assessment - **including all essential documentation.**

- Do you store flammable liquids in open, non-original sealed bundles?
- Is there any filling and transferring inside or next to the safety cabinet?

If you have answered one of these questions with YES, than your storage is already **ACTIVE!**

or

Beside TRbF 20 Annex L further additional requirements TRbF 30, BGR 120, TRGS 526, BGR 132 rather TRBS 2153 and DIN EN 60079-10 are considerable while active storage.

Use the

certified system solutions

to achieve the specific requirements!

The certificate from TÜV Süd is an important component of your risk assessment.

The system solution for active storage - see page 149.
